

POWER TO THE PEOPLE.

SOLARWATT. PRODUCE ENERGY. MANAGE ENERGY. STORE ENERGY.

 **SOLARWATT**[®]
power to the people

THE SOLARWATT MISSION. POWER TO THE PEOPLE.

The future of energy is decentralization: where electricity is generated and stored exactly where it will be used. This will not only save raw materials and reduce emissions – but also make each individual more independent.

This is SOLARWATT's goal: give everyone complete control over their own energy budget. Everyone should be able to produce, save, and use their own energy in the way which benefits them most. Everyone should have maximum control over their own energy budget. Everyone should be able to produce, store, and make optimal use of their own electricity. They should be able to do this such that it's not only worth it environmentally but also financially.

We are for free and fair power supply. For all.

OUR PATH TO BECOMING A SYSTEMS PROVIDER

- **1993** SOLARWATT founded by experts from the Center for Microelectronics Dresden
- **1995** Industrial production of photovoltaic modules
- **1998** SOLARWATT produced the world's first glass-glass PV module
- **2006** Outfitted the BMW Welt in Munich with a system yielding 800 MWh annually
- **2011** Strategically pivoted to become a provider of intelligent complete systems
- **2011** EasyIn solar panels made available as alternative to conventional roof tiles
- **2012** Complete PV systems for both private households and commercial use
- **2013** SOLARWATT Carport System
- **2014** SOLARWATT EnergyManager
- **2015** MyReserve battery storage
- **2016** Became market leader for glass-glass module production
- **2017** MyReserve Matrix battery system

"While renewable energy policy is stuck in abstract discussion – we already offer our customers solutions."

Detlef Neuhaus, CEO SOLARWATT

FAIR ENERGY. MADE IN GERMANY.

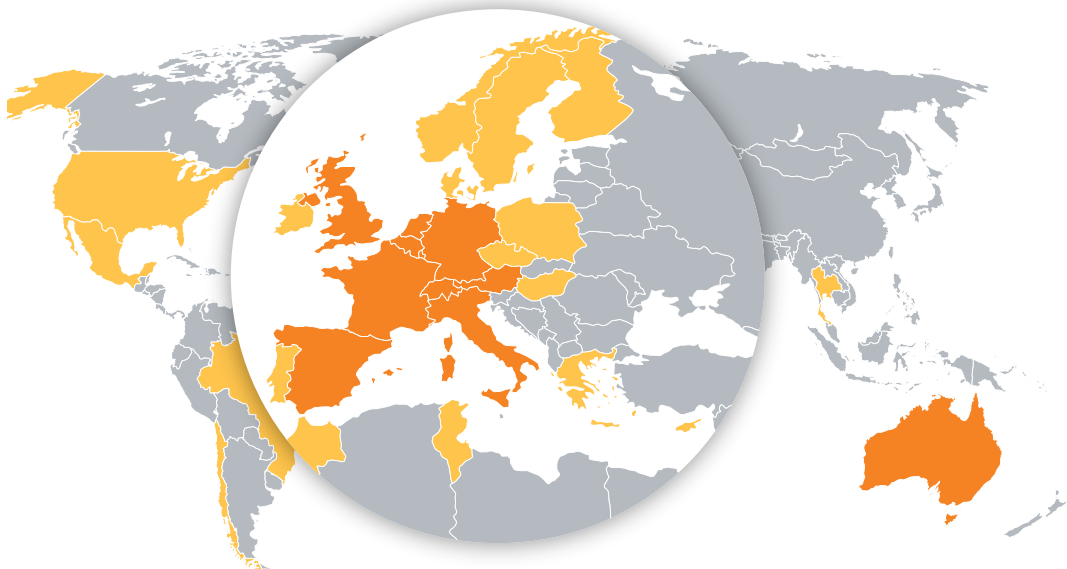

What was born in 1993 as a vision of three solar pioneers is today the leading German manufacturer of photovoltaic systems, the European market leader for glass-glass modules, and one of the world's largest battery providers. Spread over the globe, more than 300 people are hard at work for your energy future.

Today, SOLARWATT has subsidiaries in Australia, Germany, France, the UK & Ireland, Italy, the Netherlands, and Spain. We serve installers and homeowners in more than 50 countries worldwide.

In 2016 the battery specialist firm, e-Wolf from Frechen, was integrated into the SOLARWATT Group. It was here that the SOLARWATT INNOVATION research center was established.

We are consistently pursuing our mission "power to the people". With intelligent system technology made from premium components and with targeted research and development.

We invite you to join us on our way to a greener future.

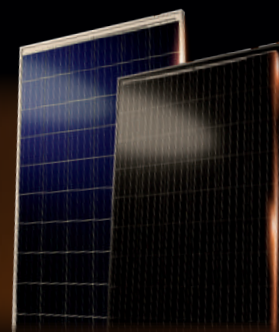

YOUR ENERGY FUTURE FROM ONE SOURCE. HIGH PERFORMANCE, ECONOMICAL SYSTEMS.

SOLARWATT is the only PV supplier to develop and produce all essential system components. By combining our core competences, we can offer you a system with the highest service life, maximum efficiency, and maximum safety.

Produce Energy

SOLARWATT has established glass-glass technology as the standard for PV modules. These modules stand out by right of their durability, extreme robustness, and highest yields. Decades of experience, uncompromising selection of raw materials, and state-of-the-art manufacturing standards ensure top quality. Each individual module is tested thoroughly before it comes to you.

Manage Energy

Only intelligent energy management enables the optimal use of your privately produced solar power. Our EnergyManager measures, switches, and visualizes all aspects of your photovoltaic system and household appliances. We support all relevant data standards. This allows a perfect interaction of all components and ensures compatibility with future devices. Maximum data security is guaranteed by encrypted communication and German server sites.

Store Energy

Power storage is the last puzzle piece of your green energy supply. A battery is the only way to access your daytime generated solar power when you really need it: in the evening. Europe's leading battery experts have developed the most efficient, most economical, and safest battery storage in the world. MyReserve from SOLARWATT increases your private consumption of your own solar power to a maximum.

The whole is more than the sum of its parts. Only perfectly matched components can build a truly optimal photovoltaic system.

RELIABLY SUSTAINABLE. BOTH END PRODUCT AND PRODUCTION.

Solar power is only as green as the components with which it is produced and saved. That is why we worked so hard to develop our resource-saving production process. We also built our products to be so efficient that they produce and save several times more energy than is necessary for their production.

When developing our products we think far beyond their service life. Their modular design facilitates repair or recycling. After a long and effective life for you and the environment, our products can simply be dismantled and recycled – the MyReserve Matrix even up to 80%.

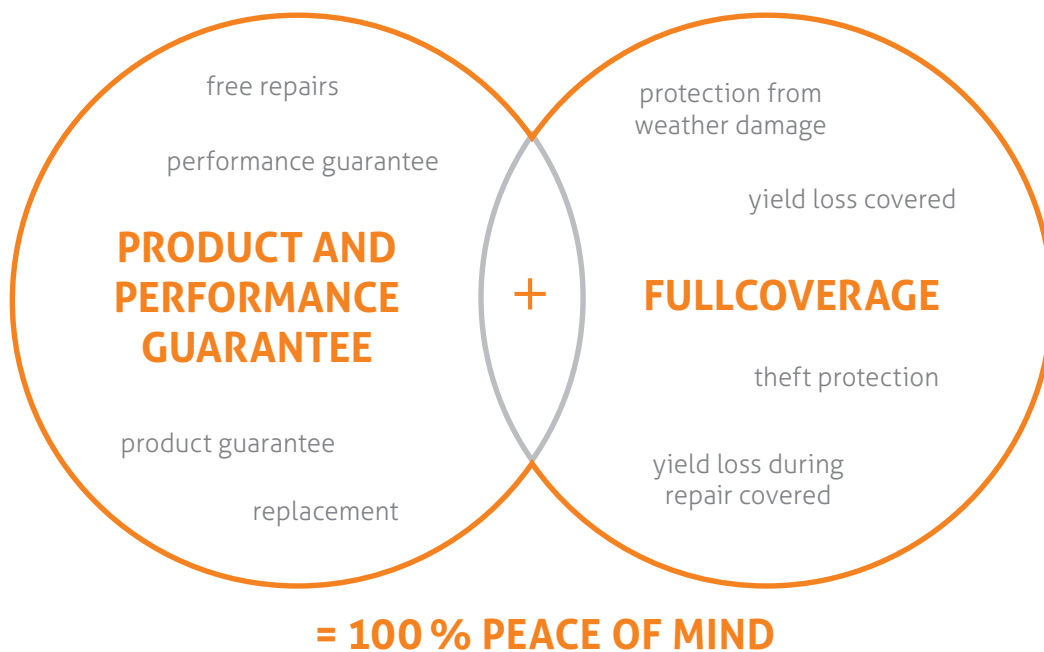

OUR GOAL: 100 % PEACE OF MIND.

With SOLARWATT's photovoltaic solutions you can produce your own electricity: this is more environmentally friendly and cheaper than conventional grid electricity. You can sit back and forget about rising electricity prices.

SOLARWATT intentionally focuses on premium quality: all products are developed and manufactured in Germany. German engineering is our daily work as motivated employees work alongside modern robots at our production sites in Dresden and Frechen. This has also convinced co-operative partners such as BMW i, Bosch, and E.ON.

You can rely on us: extensive guarantees, including the performance guarantee, secure your photovoltaic system for 30 years. You have no cause for worry over theft, loss of earnings, or weather damage. SOLARWATT's free insurance has you fully covered.

**PRODUCE ENERGY.
MANAGE ENERGY.
STORE ENERGY.**
